

high power laser matter pdf

The interaction of high-power laser light sources with matter has given rise to numerous applications including; fast ion acceleration; intense X-ray, gamma-ray, positron and neutron generation ...

Shedding high-power laser light on the plasma density limit

Lasers are distinguished from other light sources by their coherence. Spatial coherence is typically expressed through the output being a narrow beam, which is diffraction-limited. Laser beams can be focused to very tiny spots, achieving a very high irradiance, or they can have very low divergence in order to concentrate their power at a great distance.

Laser - Wikipedia

The High Power laser Energy Research facility (HiPER), is a proposed experimental laser-driven inertial confinement fusion (ICF) device undergoing preliminary design for possible construction in the European Union. HiPER is the first experiment designed specifically to study the "fast ignition" approach to generating nuclear fusion, which uses much smaller lasers than conventional designs, yet ...

HiPER - Wikipedia

By the early 1970s it was clear to the US DoD that an airborne laser weapon was feasible using existing laser technology, an idea which was actively promoted during the late 1960s by physicist Dr Edward Teller, co-inventor of the hydrogen bomb.
