

reaction mechanisms of metal pdf

The aldol reaction is a means of forming carbon-carbon bonds in organic chemistry. Discovered independently by the Russian chemist Alexander Borodin in 1869 and by the French chemist Charles-Adolphe Wurtz in 1872, the reaction combines two carbonyl compounds (the original experiments used aldehydes) to form a new β -hydroxy carbonyl compound. These products are known as aldols, from the

Aldol reaction - Wikipedia

An acid-base reaction is a chemical reaction that occurs between an acid and a base, which can be used to determine pH. Several theoretical frameworks provide alternative conceptions of the reaction mechanisms and their application in solving related problems; these are called the acid-base theories, for example, Brønsted-Lowry acid-base theory.
