Plasticine: A Reconfigurable Architecture For Parallel

order to most efficiently run an application in a reconfigurable computing system , the areas of the program

that cannot be easily mapped to the reconfigurable logic are executed on a host microprocessor. Meanwhile, the areas with a high density of computation that can benefit from implementation in hardware are mapped to the reconfigurable logic.

An Introduction to Reconfigurable Computing

reconfigurable computing that has been made possible by FPGAs. ... As the name implies, this architecture has logic blocks arranged in rows ... method of decoupling the placement and routing tool from the architecture incurs the penalty of slower execution of these steps.
