Recursion in computer science is a method of solving a problem where the solution depends on solutions to smaller instances of the same problem (as opposed to iteration). The approach can be applied to many types of problems, and recursion is one of the central ideas of computer science.. The power of recursion evidently lies in the possibility of defining an infinite set of objects by a ...

### **Recursion (computer science) - Wikipedia**

Recursion occurs when a thing is defined in terms of itself or of its type. Recursion is used in a variety of disciplines ranging from linguistics to logic. The most common application of recursion is in mathematics and computer science, where a function being defined is applied within its own definition. While this apparently defines an infinite number of instances (function values), it is ...

Matching Balanced Constructs. The main purpose of recursion is to match balanced constructs or nested constructs. The generic regex is  $b(?:m|(R))^*e$  where  $b$  is what begins the construct,  $m$  is what can occur in the middle of the construct, and  $e$  is what can occur at the end of the construct. For correct results, no two of  $b$ ,  $m$ , and  $e$  should be able to match the same text.
